

## Is scanning better than a STS Slipper Casting sock?

*before you cast your dollars here are a few points  
the scanning companies won't tell you*

### **scans are not cheaper**

Not even close. The scanning companies and laboratories are very careful to say that their per-scan cost is much cheaper – provided you don't factor in the tremendous up-front capital costs, the on-going maintenance costs, and the serial upgrade costs. Look at all those numbers.

### **scans are not so much faster**

Casting is not an assembly line process.  
In real practice STS Socks are plenty fast and they run circles around plaster.

### **scans are not so much more accurate**

STS Socks are just as accurate as scans—at a fraction of the cost.

### **scans are not more efficient**

*Not* if you need to move either your patient or a mass of scanning equipment from room to room.

*Not* if you must use a select few laboratories - STS casts are accepted by all laboratories.

*And not* if the machine is malfunctioning and all casting is shut down.

**STS Socks**  
**Simple, Fast, Accurate, Cost-Efficient**

**Innovative Casting Technology**
